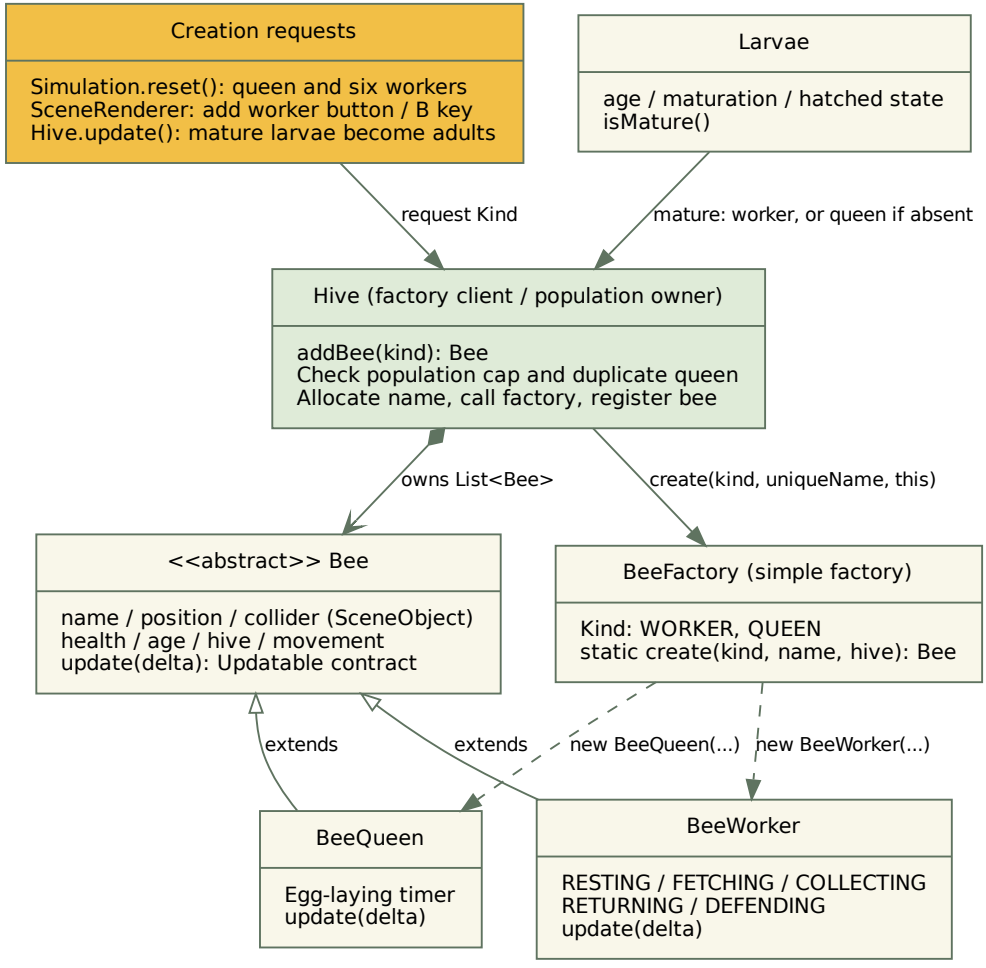
# COMP2000 / Bees Week 13
# Simple Factory: creating a valid adult bee



This is a Simple Factory, not the GoF Factory Method pattern.
Creation is centralized in a static method; there is no overridable creator hierarchy.
Alternative: constructors scattered through the controller and hatching code.
Trade-off: adding a bee kind edits the enum and switch. Hive retains population rules.
This factory and the initial Strategy seam were already in the supplied Week 7 code.
